

THE OES ADVANTAGE

We have a huge love of sports, but it's our 30 year background in mission critical applications that embraces the technology and makes our product brighter, clearer, stronger, greener, more durable, more user friendly, and more dependable. High quality solutions come from our athletic passion and 25% engineering staff.

WE ARE A SUPERIOR SCOREBOARD COMPANY. WE ARE THE CHOICE OF THE PROS.

OES Scoreboards has been advancing scoreboard technology and delivering innovative scoring and timing solutions to the marketplace for well over a decade. OES has a full line of products for schools, arenas, sports clubs, and associations, and has provided large custom systems for use in major league venues for NBA, NHL, NFL, and MiLB teams.

VISIBILITY

Leading edge "surface mount" LED technology improves the appearance for spectators from various angles and distances. OES is acclaimed to be the first scoreboard company to use LEDs on scoreboards and continues to drive LED innovation.

NUMBER OF LEDs PER DIGIT

The number of LEDs used in each digit provides unbelievable intensity and OES has more LEDs per digit than competitor's boards. The quality is visible every time the scoreboard is in use.

WHITE LEDs

OES is the only leading company to offer white LEDs on their scoreboard equipment. These digits give off the brilliance of crystal.

DURABILITY

Enclosures have powder coating over the entire exterior making them resilient to wear and tear. This adds to the life span of the cabinet and limits possibility of rusting.

CONFORMAL COATING

Circuit boards have an acrylic based conformal coating to protect against moisture found in outdoor and arena environments. This helps maintain the life span of each component.

WARRANTY

The latest technologies are used, allowing many service issues to be resolved by phone (24 hour technical support line 519-317-2661).

A standard 5 year warranty applies to all OES scoreboard equipment.

ENERGY EFFICIENT

Designed with low maintenance, longer lasting LED technology (approximately 1/3 the energy consumption level), the green savings are both in the air and in your pocket.

INSTALLATION SAVINGS

OES scoreboards are shipped in large sections with very little installation time required. Other boards often require days of post purchase assembly costs before being ready.

CONTROLLER

Our ISC9000 controller is easy to use with its full LCD display, real-time scoring, and operator manipulation of scoreboard/controller settings. The same controller used in our pro venues is supplied with all of our standard products used in schools, arenas, and gymnasiums.

LEXAN PANELS

For those out of control balls and pucks, our digits are protected with shatter resistant Lexan panels. This provides additional environmental protection on outdoor scoreboards.

This feature is standard on all scoreboards

RETROFIT KIT

For those wanting the big game experience without the big game cost, a scoreboard retrofit is a great alternative.
